[www.storaenso.com](http://www.storaenso.com)

Description of the organisation: Stora Enso is a leading provider of renewable solutions in packaging, biomaterials, wood and paper to global markets. Our customers include the packaging, joinery and construction industries as well as publishers, printing houses and paper merchants. Our aim is to replace non-renewable materials by innovating and developing new products and services based on wood and other renewable materials. Our focus is on fibre-based packaging, plantation-based pulp, innovations in biomaterials, and sustainable building solutions.

Stora Enso's Wood Products division is a market-leading provider of innovative wood-based products for construction and interior usages. Our product range covers all areas of urban construction including massive wood elements, wood components, engineered wood products and pellets. All our mills run an integrated management system, which is certified in accordance with Chain of Custody (FSC® and/or PEFC™), quality management (ISO 9001), environmental management (ISO 14001), health and safety (ISO 45001), and energy management (ISO 50001) requirements.

Name and location of production site: Stora Enso Wood Products Ltd. Ždírec

## Product information

Product name: KVH® structural timber by Stora Enso

Product identification: KVH® structural timber is placed on the market according to technical standards EN 15497 and EN 14081

Product description: KVH® structural timber (Konstruktionsvollholz) is a technically dried, strength-graded and generally finger-jointed solid wood product made from softwood (mainly spruce) and designed for a wide variety of applications in modern timber construction. In

collaboration with other Institutes, the Supervisory Board for structural timber (Überwachungsgemeinschaft Konstruktionsvollholz e. V.) has drafted requirements and defined these in an agreement to form the basis for production and supply. Therefore, KVH® structural timber complies with additional requirements which exceed the general building inspectorate guidelines.

Geographical origin: Czech Republic

### Use applications:

## Technical information

Properties	KVH® - Si (visible areas)	KVH® - NSi (non-visible structures)
Widths	40–140 mm	upon request
Heights	60–260 mm	upon request
Standard Lengths	5 m and 13 m (up to 16 m possible)	upon request
Wood species	spruce ( <i>Picea abies</i> )	Spruce ( <i>Picea abies</i> )
Adhesives	emulsion-polymer-isocyanate adhesive (EPI)	emulsion-polymer-isocyanate adhesive (EPI)
Moisture content	15% ± 3% when dispatched from the mill	15% ± 3% when dispatched from the mill
Density	450 kg/m <sup>3</sup>	450 kg/m <sup>3</sup>
Visual quality	Rough	Rough
Strength class	Min. C24	Min. C24
Surface	Planed and chamfered	Levelled and chamfered

## Product composition

Materials / chemical substances	kg	%	Notes
Wood ( <i>Picea abies</i> & <i>Pinus sylvestris</i> )	449,5	99,9	Water content 13% ± 2,3%
Emulsion polymer isocyanate (EPI) resin	0,44	< 0,1	fingerjoint gluing
Hardener	0,06	< 0,1	fingerjoint gluing
TOTAL	450	100	

The product does not contain any substances or products that are listed in the “Candidate List of Substances of Very High Concern for Authorisation”.

## Biogenic carbon content at the factory gate

Biogenic carbon content	Unit (expressed per declared unit)
Biogenic carbon content in product	717 kg CO <sub>2</sub> eq. / m <sup>3</sup> = 195,4 kg C / m <sup>3</sup>
Biogenic carbon content in accompanying packaging	0 kg CO <sub>2</sub> eq. / m <sup>3</sup> = 0 kg C / m <sup>3</sup>
1 kg biogenic carbon is equivalent to 44/12 kg of CO <sub>2</sub>	

## LCA information

Declared unit: 1 m<sup>3</sup> of KVH<sup>®</sup> with a moisture content of 15%

Reference Service Life (RSL): The RSL is understood as the period of time until the KVH<sup>®</sup> is replaced, rebuild, renovated or restored. If properly installed, the service lifetime of KVH<sup>®</sup> is equal to the lifetime of the building, and thus 50 years is the default reference service life. Wood products can reach over 100 years' service life in service classes 1 and 2.

Time representativeness: Data for the study was collected from Stora Enso Wood Products mills and represents the year 2018. This data includes raw material, transport distances, fuels, energy consumption, packaging, produced KVH<sup>®</sup>, by-products and waste. Data from ecoinvent 3.5 has been used for generic data. The allocation is performed according to EN15804. Physical, economic and energy

allocations have been used.

Database used: Ecoinvent 3.5 (August 2018)

LCA software used: SimaPro 9.0

Description of system boundaries: cradle to gate with options, modules C1–C4 and module D

More information: Standards EN 15804:2012 + A2:2019, EN 16485:2014 and PCR 2019:14 from The International EPD<sup>®</sup> System provide the core product category rules for the assessment. Biogenic carbon content of wood is calculated in line with EN 16449:2014 standard.

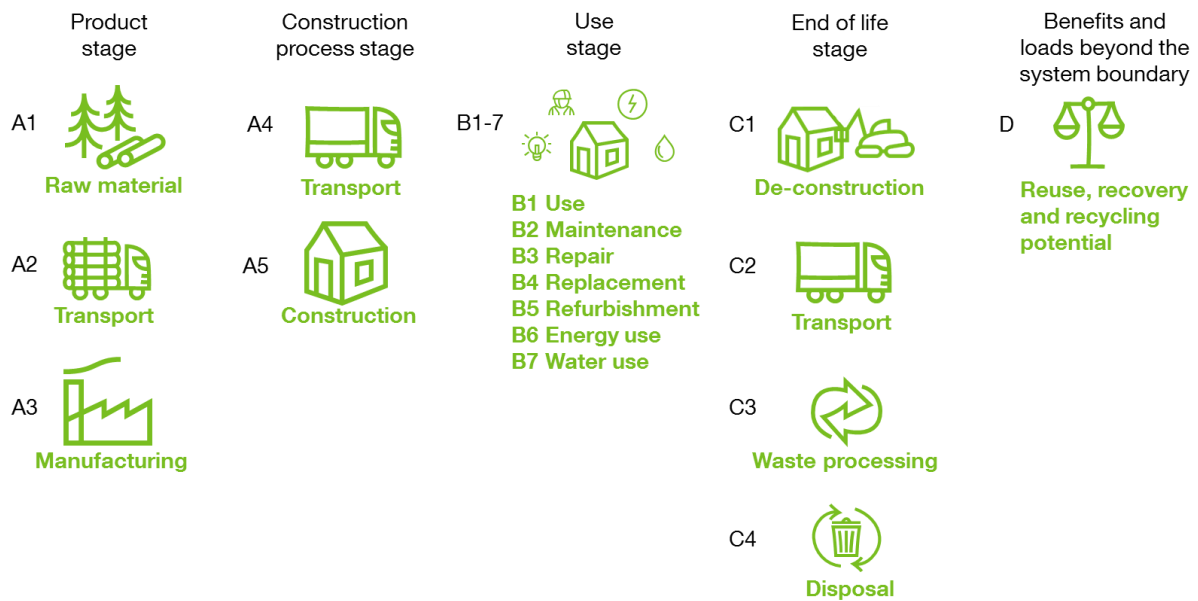

Target group: business to business & business to consumers

Cut-Off Rule: 1%. This rule is based on the assumption that the input flows do not have a major impact on the environmental impacts as a whole.

### System boundary:

Production			Con- struction		Use							End of Life				Loads & Benefits
Raw material	Transport supply	Manufacturing	Transport	Installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy	Operational water	Deconstruction	Transport	Waste treatment	Disposal	Reuse / Recovery / Recycling
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	x	x	NR	x	NR	NR	NR	NR	NR	NR	NR	x	x	x	x	x
x = included			NR = module not relevant				ND = Module not declared									

The analyzed system is the complete life cycle of 1 m<sup>3</sup> KVH<sup>®</sup> to be used as structural element in a building or as packaging material. According to the EN 15804 standard all life cycle stages are included in the LCA, assuming that there is no maintenance needed over the reference service life.

Product stage:

**A1:** This stage covers the extraction and processing of raw materials, such as forestry operations as well as glue production. All Stora Enso’s wood raw material is sourced through a third-party certified wood traceability system. Stora Enso traceability system is certified according to FSC® and PEFC™ Chain of Custody systems.<sup>1</sup>

**A2:** This stage covers the transportation of the raw materials to the mill and the fuels needed for internal transportation. The wood supply operations cover procurement of softwood from the Czech Republic. Purchased logs are spruce logs transported with trucks and train.

**A3:** This stage covers the production of KVH® and by-products. Generation of electricity or heat from primary energy resources are counted. Also packaging materials and the treatment of waste not leaving the factory with the product are counted.

Construction process stage:

**A4:** This stage shows additional information such as average figures from the transportation to the construction sites. There are no environmental impacts reported in this EPD, since there are multiple applications and usages possible. Specific transport information can be given on request.

**A5:** Construction process includes such packaging waste, which relates to the delivered product and construction of the product. Results in this stage includes only packaging waste on the construction site and no impacts from installation, since there are multiple applications and usages possible.

Use stage:

**B1–B7:** There are no environmental impacts expected in the use phase, and at least no harmful substances are released to air, water or ground during the use of the product.

<sup>1</sup> FSC trademark license nr. C125195

End of life scenarios:

Four alternative scenarios have been developed for the end of life stage (C1–C4 & D).

- ❖ **Reuse:** KVH® is reused in coherent form. C1: demolition of the building, C2: transportation to the sorting 50 km, C3: preparing for reuse, C4: product for reuse, D: reuse of product, substituting virgin material
- ❖ **Recycling:** KVH® chipping for recycling. C1: demolition of the building, C2: transportation to the sorting 50 km, C3: preparing for recycling, C4: chips to recycling, D: recovery of wood chips, substituting virgin material
- ❖ **Incineration:** KVH® incineration for energy recovery C1: demolition of the building, C2: transportation to the sorting 50 km, C3: preparing for incineration, C4: chips to incineration (75% efficiency), D: substitution of natural gas in heat production
- ❖ **Landfilling:** KVH® is landfilled. C1: demolition of the building, C2: transportation to the sorting 50 km, C3: preparing for landfilling, C4: landfilling process, D: the methane uptake from landfill partly substitutes natural gas in heat production

Carbon sequestration and storage:

The sequestration of carbon dioxide (CO<sub>2</sub>) is unique to renewable materials. Biogenic carbon content of a renewable material is an outcome of the CO<sub>2</sub> that has effectively been removed from the atmosphere by photosynthesis of growing trees and other plants, and turned into sugars (carbon) and oxygen. The quantity of atmospheric CO<sub>2</sub> has thus been reduced. The longer the CO<sub>2</sub> is not in the atmosphere but stays stored in a material, the greater the environmental benefit.

Biogenic carbon of wood is calculated according to the EN 16485 and 16449 standards. Half of the dry mass of wood is carbon. Each kg of stored biogenic carbon is equal to ~3.67 kg of CO<sub>2</sub>, which is effectively removed from the atmosphere. In case of KVH® the biogenic carbon content is -717 kg CO<sub>2</sub> eq./m<sup>3</sup>. Biogenic carbon enters the product system in forest (module A1) and for calculation purpose it is assumed to leave latest from the product system in the end-of-life stage (module C). This assumption can be made when wood is sourced from sustainably managed forest.

**Sustainable wood**

Stora Enso practises and promotes economically, socially, and environmentally sustainable forest management. The two most significant forest certification systems recognised by Stora Enso are run by the Forest Stewardship Council (FSC®) <sup>1</sup> and the Programme for the Endorsement of Forest Certification (PEFC™).

**Storing carbon**

Trees absorb carbon dioxide and remove carbon from the atmosphere while growing. Wood products store the captured carbon. This helps reverse the greenhouse effect. Total carbon storage in the products are increased by re-using and recycling of products. Finally, when biogenic carbon is released back to atmosphere, growing trees will absorb carbon dioxide again.

**Recycling**

Wood is recyclable and a good resource for new fibre-based products or energy generation to substitute fossil materials and energy. Collection schemes and recycling rates depend on waste legislation, consumer behaviour, point of consumption, local collection system and infrastructure. EU target for building demolition waste recycling is 70% in 2020.

## Environmental performance – product / construction stage

Exported energy	MJ	0,00E+00	0,00E+00	0,00E+00	7,24E+01	-7,24E+01

\* biogenic carbon content in wood -717 kg CO<sub>2</sub>-eq.

\*\* The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

## Additional environmental impact indicators

Information about additional environmental impact indicators for each module is declared in “Environmental Product Declaration. KVH® by Stora Enso – ANNEX A” and available on request:

INDICATOR	Particulate matter emissions	Ionising radiation, human health ***	Ecotoxicity (freshwater) **	Human toxicity, cancer effects **	Human toxicity, non-cancer effects **	Land use related impacts / soil quality **
UNIT	Disease incidence	kBq U235 eq.	CTUe	CTUe	CTUe	dimensionless

\*\* The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experience with the indicator.

\*\*\* This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

## Programme-related information and verification

<b>Programme:</b>	The International EPD® System  EPD International AB Box 210 60 SE-100 31 Stockholm Sweden  <a href="http://www.environdec.com">www.environdec.com</a> <a href="mailto:info@environdec.com">info@environdec.com</a>
<b>EPD registration number:</b>	S-P-02153
<b>Published:</b>	03-08-2020
<b>Valid until:</b>	31-07-2025
<b>Reference year for data:</b>	2018
<b>Geographical scope:</b>	Czech Republic
<b>Product category rules:</b>	PCR 2019:14, v.1.0 Construction products  C-PCR-006 (to PCR 2019:14) Wood and wood-based products for use in construction
<b>UN CPC code:</b>	316 – Builders' joinery and carpentry of wood

<b>Independent third-party verification of the declaration and data, according to ISO 14025:2006:</b>	<input type="checkbox"/> EPD process certification <input checked="" type="checkbox"/> EPD verification
<b>LCA study conducted by:</b>	Stora Enso – Division Wood Products
<b>Third party verifier:</b>	Dr. Andrew Norton, Renewables Ltd.
<b>Approved by:</b>	The International EPD® System
<b>Procedure for follow-up of data during EPD validity involves third party verifier:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.
