

Black PE coated multilayer kraft board

CKB Nude BPE is an uncoated, brown, multilayer kraft back board with a polyethylene-coated reverse made of unbleached chemical pulp and additional CTMP in the middle layer. The PE coating on the reverse is black.

Issued: 12.2020
Cancels: 09.2018

Technical specification

Property / Unit	Tolerance	205+20	230+20	255+20	325+20	345+20	Standards
Polymer coated board:

Tearing resistance MD, mN	-800	2900	3400	3900	5000	5400	TAPPI 496 sp-99
Tearing resistance CD, mN	-800	3300	3800	4300	5700	6200	TAPPI 496 sp-99
Cobb 60, g/m ² , Top		30	30	30	30	30	ISO 535
Cobb 60, g/m ² , Reverse		30	30	30	30	30	ISO 535

Certificates

Quality management ISO 9001
 Environmental management ISO 14001
 Product safety FSSC 22000
 Health and safety OHSAS 18001
 Energy management ISO 50001

FSC and PEFC certified board available upon request.

Paperboard is recyclable

Key characteristics and main enduses

CKB Nude BPE provides a fantastic opportunity to differentiate a brand on the shelf. Its eye-catching and organic appeal embraces the beauty of nature's own shades of brown – creating a look that is both timeless and trendy. It is an ideal packaging material for applications that require protection against humidity. CKB Nude BPE offers great stiffness, strength, runnability and convertibility. CKB Nude BPE helps optimize package performance, ensures high visual quality, saves materials and, in food packaging, helps reduce food waste. The all-brown board has a natural look and feel, but is fully made of virgin fibre.

Printing and finishing techniques

The product can be used with different printing techniques such as offset, flexo and digital printing. In digital printing, the product is suitable for several different sheet- or web-fed presses. Inkjet, dry or liquid toner technology can be used, although in some cases, pretreatment of the substrate might be required. The latest certification status can be verified on the press manufacturer's website or with local Stora Enso representatives. It is important to check the limitations of the equipment, particularly because of the exceptional difference in the thickness and stiffness of board compared with paper in the same grammages. When running thicker substrates, the press manufacturer's recommendations should be referred to for optimal grain direction. Essentially all of the same finishing processes apply to both digitally printed and offset printed work. Since a wide variety of digital printing equipment is available in the market, it is important that a new commercial print job is always preceded by a trial run, including all required printing and converting process phases. The product works very well with different finishing techniques, such as embossing, hot foil stamping and others.

Storage recommendations

For optimal printing results, the moisture proof wrapping should not be removed until the board has reached the temperature of the press room.

Pallet/Reel Weight (kg)	Difference in temperature between board and press room (press room temp. approx. 20°C)		
	10°C	20°C	30°C
400 kg	2 days	2 days	3 days
800 kg	2 days	3 days	4 days
1200 kg	2 days	4 days	5 days

The product properties, according to the specifications, are guaranteed for 12 months after the production date. In order to ensure product safety, the product must be well wrapped and stored indoors, sheltered from rain and snow. The recommended storage conditions are 50-55% relative humidity and 20-23°C.

For the Corona treatment, we recommend using the board within 12 months of the production date; after this period, the treatment level should be tested before printing or gluing.
